

SHALAKA VINOD JAITAPKAR

AI EVALUATION AND QUALITY ENGINEERING | PAYMENTS | UAT GOVERNANCE

London, UK | +44 7767 941328 | jaitapkar.shalaka@gmail.com | linkedin.com/in/svjaitapkar | github.com/jshalaka

PROFESSIONAL PROFILE

Quality Engineering and UAT Test Lead with 9+ years of experience across banking, payments, financial services, telecom and retail. Combines regulated-domain testing, release governance and stakeholder leadership with an MSc in Artificial Intelligence and hands-on Python development of an open-source LLM-enabled UAT agent. Built deterministic evaluation guardrails, schema contracts, acceptance-criterion coverage, semantic traceability, controlled correction, execution observability and a 78-test PyTest regression suite. Experienced in translating business rules and operational risks into measurable quality evidence while retaining human approval for consequential decisions.

ROLE ALIGNMENT

AI EVALUATION	REGULATED DOMAIN	ENGINEERING	GOVERNANCE
Golden-case design, deterministic checks, coverage, traceability and guardrails	Payments, BFSI, UAT, risk-based testing and release readiness	Python, PyTest, Pydantic, APIs, Git/GitHub, Jenkins and structured data	Human review, entry/exit criteria, defect triage and audit-ready reporting

SELECTED AI ENGINEERING PROJECT

TestScope AI UAT Agent | Independent open-source project | GitHub

2026

- Designed and built a working Python agent that converts software requirements into structured, risk-aware and traceable UAT TestPacks using a locally hosted Qwen3 4B model through Ollama.
- Defined Pydantic input/output contracts and treated probabilistic model output as untrusted until it passed deterministic validation.
- Implemented guardrails for identifier integrity, unknown references, duplicates, missing steps, acceptance-criterion coverage, high-risk coverage and risk/ambiguity/assumption traceability.
- Added deterministic semantic enrichment, one controlled correction attempt and a human-review block when output remained incomplete or invalid.
- Built execution observability with RUNNING, COMPLETED and FAILED states, timestamps, duration, failure stage and diagnostic information stored in SQLite.
- Delivered a Streamlit review interface, reusable workflow orchestration, JSON export and a four-sheet Excel TestPack; validated by 78 automated PyTest tests with no warnings.
- Managed incremental delivery through eight merged GitHub pull requests, increasing the regression suite from 36 to 78 tests while strengthening traceability and operational controls.

Technology: Python, PyTest, Pydantic, Ollama, Qwen3 4B, Streamlit, SQLite, OpenPyXL, JSON, Git and GitHub

PROFESSIONAL EXPERIENCE

UAT Test Lead | Capgemini | London, UK

Dec 2025 - Present

- Own UAT strategy, scope, entry and exit criteria, planning and business scenarios for a complex enterprise client engagement.
- Coordinate business testers, validate and retest defects, chair defect triage and maintain delivery evidence through Jira.
- Assess test progress, unresolved risks and exit evidence to support go-live readiness and stakeholder sign-off.
- Work across business, product, development and delivery stakeholders to clarify requirements, manage dependencies and improve test-management practices.

Senior Test Analyst | Cognizant | Malaysia

Mar 2022 - Aug 2023

- Led quality activities for high-transaction payment platforms in a regulated financial-services environment, covering SIT, UAT, API, database and regression testing.
- Worked with product owners, delivery teams and business stakeholders on release planning, defect risk, operational readiness and test reporting.
- Applied Selenium/Java automation and CI-aligned validation while retaining risk-based manual and business-flow coverage.

Test Engineer Analyst | Accenture | India

Oct 2019 - Mar 2022

- Designed and maintained Selenium-Cucumber regression automation for Salesforce and Cloudsense workflows and integrated test execution with Jenkins.
- Executed system integration, end-to-end and UAT validation; coordinated defect resolution and mentored testers on consistent quality practices.

Senior Process Associate | Tata Consultancy Services | India

May 2016 - Oct 2019

- Built reusable Selenium-Java automation and delivered regression, integration, API, database and performance validation for BFSI applications.
- Used JMeter and structured quality reporting to assess performance risk and release readiness across repeated delivery cycles.

Software Engineer | Atos | India

Apr 2015 - Jan 2016

- Executed manual test plans, maintained quality documentation and supported defect reporting for enterprise applications.

Trainee Engineer | Amicontech | India

Sep 2014 - Apr 2015

- Supported automated testing, test-data preparation and defect triage under senior engineering guidance.

MACHINE LEARNING RESEARCH

Multimodal Amazon Product Recommendation System | MSc Dissertation | Brunel University London

2024

- Curated and analysed an Amazon product dataset containing 1,308,489 rows and 20 fields across product metadata, ratings and customer-review text.
- Performed text preprocessing, feature engineering and sentiment analysis; evaluated Decision Tree, Random Forest, CatBoost, CNN, LSTM and attention-based models.
- Used accuracy, precision, recall, F1, confusion matrices and ROC analysis to compare model behaviour; CatBoost achieved 92.82% accuracy and CNN achieved 92.72%.
- Documented methodology, limitations and comparative evidence to support reproducibility and evidence-based model selection.

ENTERPRISE AI SOLUTION DESIGN

AI-enabled Test Management | Copilot Studio with Jira and Confluence | Solution proposal

2026

- Designed a modular operating model covering planning, requirement analysis, test design, approval, execution, defects, reporting and sign-off.
- Defined human approval, identity/access, prompt versioning, audit history, evaluation controls and success measures for a controlled proof of concept.
- Positioned Jira as the workflow system of record and Confluence as the approved evidence layer, connected through Copilot Studio and Power Automate.

TECHNICAL CAPABILITIES

AI and evaluation: LLMs, prompt engineering, AI output validation, deterministic guardrails, model evaluation, human-in-the-loop controls, responsible AI

Python and data: Python, PyTest, Pydantic, Pandas, NumPy, Scikit-learn, TensorFlow/Keras, SQL, JSON, SQLite, REST APIs

Quality engineering: UAT, SIT, E2E, risk-based testing, API/database testing, regression, accessibility, performance and defect management

Delivery platforms: Git, GitHub, Jenkins, Jira, Confluence, Azure DevOps, TestRail, HP ALM, Streamlit, Postman, Selenium and Playwright

EDUCATION AND CERTIFICATIONS

Qualification	Institution	Completed
MSc Artificial Intelligence	Brunel University London	2024
MBA IT Operations	NMIMS Mumbai	2020
Master of Computer Applications	Thakur College of Management Studies	2014
ISTQB Certified Tester AI Testing v1.0	iSQI / ISTQB - Certificate 26-CT-AI-279789-12	12 Jul 2026
ISTQB Certified Tester Foundation Level	ISTQB	Certified
